

Unit 3 – Lesson 1: Max and Min

Try it:

```
a = int(input("Enter a number: "))  
b = int(input("Enter a number: "))  
c = int(input("Enter a number: "))  
  
print ("Biggest: " + str(max(a, b, c)))
```

- What happened?

Function

- A set of commands which can be run by calling it by name.
- Do one task
- Lets you reuse code
- Example: `max`

Using Functions

- We *call* a function by typing its name:

```
print (min ( a, b) )
```

- We send information to a function in between the ()
- Called parameters

Parameters

- The information we send to a function
- Separated by a ,
- Not all functions need parameters
- Ex: `x = random.random()`

Vocabulary

Function	A set of commands which can be run by calling it by name.
Parameters	Information sent to a function.
